Slides

TELESCOPIC SLIDES

**L1984.43D**

## Material

Cold drawn bearing steel raceways hardened to 60 HRc. Balls - hardened steel.

Zinc coating to ISO2081 (excluding raceways). Corrosion resistant coatings available on request.

## Technical Notes

These are extremely strong and rigid telescopic slides with high load capacities.  $C_{0\text{rad}}$  is the load rating for a single telescopic

slide. They have very low deflection characteristics.

Temperature range: -30°C to +110°C.

This is the double direction stroke version - the moving member can extend out of both sides of the slide.

Moving rail must be lower rail (unless technical department consulted).

## Tips

When closing a D version slide, the return of the intermediate member is not auto-

matic. When the moving element has started the stroke in the opposite direction it will catch the intermediate member and force it to return.

The slides have end stops, but these are not designed to stop a moving, loaded slide. External end stops should be used for this.

Only to be used for horizontal movements.
