ROTARY STAGES

Material

Aluminium alloy body (light, stiff and stable), black anodised.
Weight 1,4 Kg.

Technical Notes

The design utilises a single preloaded crossed roller bearing system for the table movement. This eliminates the use of dual bearing configuration, thus improving axial runout and wobble.
The stages are offered with different gear ratio options. A proprietary preload system ensures zero backlash in the gear train.
The travel is 360° continuous.
Easy to use plug and play system when used with a motion controller. Can be used

in conjunction with motorised linear stages for multi axis applications.
Servo motor stages are only compatible with servo motion controllers. These allow for greater speeds but are more expensive.

Tips

Requires external home switch (if required).

Motor options:

Stepper - Nema 23, high torque, brushless. 0.95 Amp/phase, 5.0 Ohm/phase, 3.1 mH/phase, 1.8°/step. Optionally with home switch and/or 1000 line rotary encoder.

Servo - Nema 23 with 1000 line rotary encoder.

Intelligent stepper - Nema 23 with a fully

programmable motion controller inbuilt (i.e. no need for an external motion controller). Two +5 to +24VDC I/O lines. One 10 bit analogue input selectable 0 to +10VDC, 0 to +5VDC. Optionally with home switch and/or 512 line rotary encoder. RS422/485 communications. Input voltage +24VDC. Drawings show stepper motor configuration. See special pages for further motor options. Resolution up to 0,29 arcsecs, depending on gear ratio and motor.

Factors affecting stage performance

Run-out

The displacement of a measure sensor placed on the surface of the rotary table.

Applied loads

These cause small deformations in the stage bearings and are dependent on the stiffness of the stage, the bearings and the stability and flatness of the mounting surface.

Hysteresis errors

The difference between the control and instructed position.

Backlash errors

Errors caused by the reversal of the direction of travel affected by clearance in the drive chain.

Encoder errors

Imperfections in the operations of the encoder (if present).
